

Raster to Vector converter

Conversion of scanned drawings and plans to vector files

Who needs RaVe?

RaVe is the solution for every professional involved in new constructions as well as in renovations of existing buildings, where processing of existing printed plans often is required. RaVe is an essential tool which accompanies each professional regardless of the CAD application they choose to use.

Main Specifications

Quick and easy to learn and use, RaVe allows very fast processing of any scanned plan and prepares it for automated generation of dwg or dxf files. RaVe includes tools for improving the quality of the scanned image and adjusts it to the correct scale before conversion.

- Automated conversion of scanned drawings into vector format2.
- Import file support for BITMAP, JPEG, PNG, TIFF, PCX, TGA
- Export to vector AUTODESK DWG, DXF
- Auto correction of the scale of each drawing
- Quality improvement of scanned drawing: holes filling, lines leaning and fining, lines fattening, outline creation
- Custom preset functions for optimal image conversion to vectors

RaVe is a high quality autonomous application for correcting and converting scanned drawings to vector files. Allows for fast and easy changes and corrections on scanned drawings, ground plans, views or sketches, resulting in optimized vector files.
